NPTel | Social Networks | Week 5 | Assignment 5 | Unique Creators Academy Abhishek Pipliya Assignment 5 Due Friday Oct Assignment 5; Due Friday, October 28 6.6a Imagine that  $X \times Y$  has some unspecified topology. Suppose  $X \times Y \rightarrow Z$  is continuous and let  $U \subset X$  be open. The inverse image of this set is  $U \times Y$ ; by continuity this set is open. Similarly if  $X \times Y \rightarrow Z$  is continuous and  $V \subset Y$  is open, then  $X \times V$  is open. If both maps are continuous, then  $U \times V \subset X \times Y \rightarrow Z$

Assignment 5; Due Friday, October 28

Assignment 5, Due Friday, Oct. 7 Exercise 2.4.3\*: Use the Subsequence Rules to prove that the following sequences are divergent: (a)  $(n^2)$ ; (b)  $(n^2 - 1)$ . Exercise 2.5.1\*: Prove that if  $f_n$  is increasing and has a subsequence  $f_{n_k} \rightarrow g$  which converges, then  $f_n \rightarrow g$ . Exercise 2.5.2\*: Let  $f_n$  be a sequence for which  $a_{n+1} = 3a_n + 1$  and  $a_1 = 1$ .

Then do the following problems: • 6.6ad • (Graduate students only) 6.6l • 7.13ab • (Graduate students only) 7.13cg • 7.13h

Assignment 5; Due Friday, October 28 - University of Oregon

5a Assigned Friday, October 20 5a Due: Friday, October 27 We will investigate the characteristics of stairs by examining existing stairs on campus. Through measuring, sketching and photography, we will investigate both the qualities of a stair in its space as well as the specific dimensions of the stair in relation to the human body.

Assignment 5: Elements: Stairs – First Year Studio

Stat 61S: Assignment 5 due Friday, October 2. 1. Let  $X_1$  and  $X_2$  be two independent Geometric random variables with success probability  $p$ :  $P(X_i = x_i) = (1-p)^{x_i} p$ ;  $x_i = 0, 1, \dots$ ;  $i = 1, 2$ : Then  $Y = X_1 + X_2$  is the number of successes before the 2nd failure. By definition  $Y$  is a Negative Binomial random variable with  $r = 2$  (see HW 2 problem 6). Prove this using the

Stat 61S: Assignment 5 due Friday, October 2.

CDS 270 (Fall 09) - Assignment 5 (Due Friday, Oct. 30) Consider a dynamical system governed by  $\dot{x} = f(x)$  where  $x \in \mathbb{R}^n$  and  $f \in \mathbb{R}^n[x]$ : Let  $x^*$  assume that  $f(x^*) = 0$  and the origin is a locally, asymptotically stable equilibrium point
