Bulk metallic glasses (BMGs), which are non-crystalline metallic alloys, can be fabricated with low cooling rates in many alloy systems. So, it is possible to produce BMGs that are several centimeters thick. BMGs exhibit useful engineering

structure of metallic glass is very different from that of conventional metals. Rather than arranging themselves into repeating patterns of grains, the atoms of metallic glasses are "frozen" in a random, disordered structure, similar to regular window glass. It even has a smooth surface like glass.

Glass? -

Streetdirectory.com

An amorphous metal (also known as metallic glass or glassy metal) is a solid metallic material, usually an alloy, with a disordered atomic-scale structure. Most metals are crystalline in their solid state, which means they have a highly ordered arrangement of atoms. Amorphous
