Their solutions define three different notions of "central" vertices. The distance matrix  $D$  can be computed rather efficiently e.g. using Dijkstra's algorithm with time complexity  $O(|V|^2 \ln |V|)$ , see e.g. Cormen et al. (1990). In many biological networks, the distance  $d(x,y)$  measures an informational separation rather than physical distance.

Lyapunov-Schmidt reduction method. Even though  
many results on single peak solutions to  
singularly perturbed Kirchhoff problems have  
been derived in the literature by various  
methods, there exist no results on multi-peak
