Praise for Facilitating a Collegial Department in Higher Education "Bob Cipriano has provided a book that addresses department civility—a critical, ongoing problem in higher education. trends in student access, faculty professionalization, curricular expansion, institutional growth, secular governance, public finance, research, and outcomes, placing them all in the context of contemporary society. Cohen organizes the book around a unique matrix of trends, topics, and eras that enables the reader either to proceed chapter by chapter through a chronological sequence of the entire history, or to easily follow a preferred topic, such as faculty or curriculum, by reading only that specific section in each era.

traditions fondly cherished by students, alumni, and faculty. There is no denying, however, that all colleges today struggle with changing consumer preferences, high sticker prices, and aging infrastructure. Technological and pedagogical alternatives—not to mention growing political pressure—present complex challenges. What can colleges and smaller universities do to stay relevant in today's educational and economic climate? In their concise guide, *How to Run a College*, Brian C. Mitchell and W. Joseph King analyze how colleges operate. Widely experienced as trustees, administrators, and faculty, they understand that colleges must update their practices, monetize their assets, and focus on core educational strategies in order to build strong institutions. Mitchell and King offer a frank yet optimistic vision

for how colleges can change without losing their fundamental strengths. To survive and become sustainable, they must be centers of dynamic learning, as well as economic engines able to power regional, state, and national economies. Rejecting the notion that American colleges are holdovers from a bygone time, *How to Run a College* shows instead that they are centers of experimentation and innovation that heavily influence higher education not only in the United States but also worldwide.

The inspiration for this timely book is the pressing need for fresh ideas and innovations in U.S. higher education. At the

heart of the volume is the realization that higher education must evolve in fundamental ways if it is to respond to changing professional, economic, and technological circumstances, and if it is to successfully reach and prepare a vast population of students—traditional and nontraditional alike—for success in the coming decades. This collection of provocative articles by leading scholars, writers, innovators, and university administrators examines the current higher education environment and its chronic resistance to change; the rise of for-profit universities; the potential future role of community colleges in a significantly revised higher education realm; and the emergence of online learning as a means to reshape teaching and learning and to reach new consumers of higher education. Combining trenchant critiques of current

conditions with thought-provoking analyses of possible reforms and new directions, Reinventing Higher Education is an ambitious exploration of possible future directions for revitalized American colleges and universities.

"The economics of American higher education are driven by one key factor--the availability of students willing to pay tuition--and many related factors that determine what schools

they attend. By digging into the data, economist Nathan Grawe has created probability models for predicting college attendance. What he sees are alarming events on the horizon that every college and university needs to understand. Overall, he spots demographic patterns that are tilting the US population toward the Hispanic southwest. Moreover, since 2007, fertility rates have fallen by 12 percent. Higher education analysts recognize the destabilizing potential of these trends. However, existing work fails to adjust headcounts for college attendance probabilities and makes no systematic attempt to distinguish demand by institution type. This book analyzes demand forecasts by institution type and rank, disaggregating by demographic groups. Its findings often contradict the dominant narrative: while many schools

face painful contractions, demand for elite schools is expected to grow by 15+ percent. Geographic and racial profiles will shift only slightly--and attendance by Asians, not Hispanics, will grow most. Grawe also use the model to consider possible changes in institutional recruitment strategies and government policies. These "what if" analyses show that even aggressive innovation is unlikely to overcome trends toward larger gaps across racial, family income, and parent education groups. Aimed at administrators and trustees with responsibility for decisions ranging from admissions to student support to tenure practices to facilities construction, this book offers data to inform decision-making--decisions that will determine institutional success in meeting demographic challenges"--
