To obtain a satisfactory understanding of the complex endocrinological events that occur during normal and abnormal reproductive function, it is necessary to quantify specific hormones.

Reproductive Endocrinology\u2014an overview | ScienceDirect...

Reproductive endocrine disorders may favor the development of temporal lobe epilepsy (TLE) in women. Conditions in which serum estrogen levels and E - P ratios are chronically elevated may be associated with an increased incidence of seizures by causing constant exposure of temporal lobe structures to estrogen without the normal luteal elevation of progesterone, thus heightening interictal epileptiform activity and the possibility of " kindling. "

The endocrine system controls the functioning of the reproductive system. The responsible endocrinal glands are known as the gonads. The gonads secrete sex hormones, which are responsible for sexual development, and the associated growth spurts in the body. They are also responsible for the development of secondary sexual characteristics.

Endocrine and Reproductive Physiology\u20146th Edition

The endocrine system is study of the glands of an organism that secrete hormones directly into the circulatory system. The organs through which the life running hormones are secreted are known as endocrine glands or simply ductless glands. The hormone secreting glands are located in different parts of a human body (see the image given below).
