Infrastructure. The environmental impact of infrastructure may be positive or negative and can occur during the construction, operation, upgrade and decommissioning or disposal of infrastructure. While similar environmental impacts such as the use of natural resources, changes in land use and disturbances in the human environment may occur in the construction and operational stages of most types of infrastructures, some sectors may bring about distinct impacts.

Access Free Environment And Infrastructure

Economies are built. As global population has grown and as economies of many regions have expanded, the quantity and scale of infrastructure has increased dramatically. Although some infrastructure is used to move people and commodities, much infrastructure is also used to control natural processes or to extract natural resources.

Development in Mega Cities

Environmental development is the direct result of investment in infrastructure, scenic surroundings, green areas, and public spaces. The planning of green areas takes into account water conservation issues, as well as how best to adapt vegetation to the local climate, while all new facilities are constructed in line with the specific needs of the local community.

Infrastructure developmental investing is a sub-sector of developmental investing, and can also be called impact investing. Developmental investing provides investors with both commercial returns and a tangible social and developmental impact. In South Africa, the primary development focus is around the provision of basic services - and infrastructure development focuses on sectors such as power, healthcare, transport, education, small, medium and micro-sized enterprise development, and ...
