PTFE film extrusion under anisotropic loading conditions produces expanded Teflon™ (ePTFE). Its micro-architecture exhibits pores axially aligned along the stretch direction, resulting in a unique fluoropolymer fabric material with an oriented microporous architecture.

This was originally commercialized as the fabric-like Gore-Tex™ material (Gore, 1976). ePTFE's porous structure is characterized by regular PTFE nodes interconnected by PTFE fibrils (Figure C.4 A), distinct from solid ...

Film Extrusion - an overview | ScienceDirect Topics

2.2.2 Blown Film Microlayer

Coextrusion Blown film extrusion is extensively utilized to fabricate packaging film, much of which is multilayered to improve mechanical, transport, and thermal properties as required by the food or medical industry.

Blown Film - an overview | ScienceDirect Topics

In the cast film extrusion process, the molten polymer travels through a flat die system to adopt its final flat film shape. The die system is formed by the die and feedblock (if the process requires coextrusion) or simply the die, if the process is that of mono-layer extrusion.
