Polymer Blends Composites And Nanocomposites

blend composites are made using recycled polymers, PP, LDPE and HDPE as the matrices and the date palm fibres as the filler. Later the flame retardant $Mg(OH)_2$ is added to the composite so that its fire resistance can be studied. The main objectives of this paper are 1) utilize available wastes such as date

Get Free Flame Retardants

palm fibres and three different types of recycled polyolefines 2) enhance the physicommechanical properties of the new composites with good flame retardancy.

(ATH or $\text{Al}(\text{OH})_3$) is the most widely used flame retardant, which together with other metal hydroxides such as magnesium and phosphorus-based additives accounts for almost half of the market weight (see Figure 3). Phosphorus-based flame retardants are expected to continue to account for one of the

Get Free Flame Retardants

fastest market gains, as they have been shown to be one of the best substitutes for halogenated FRs by both cost and final performance.
