Harmonic Analysis A Course In

A Course in Abstract Harmonic

Analysis is an introduction to that part

of analysis on locally compact groups

that can be done with minimal

assumptions on the nature of the

group. As a generalization of classical

Fourier analysis, this abstract theory

creates a foundation for a great deal of

modern analysis, and it contains a

number of elegant results and

techniques that are of interest in their

own right.

The course will treat central concepts and results in modern harmonic analysis, which are developments from classical Fourier analysis. One possible theme may be harmonic analysis related to the study of singular integrals and complex and real methods. Some key concepts are: maximal functions, Calderon-Zygmund decompositions, the Hilbert transform, Littlewood-Paley theory, Hardy spaces, Carleson measures, Cauchy integrals, singular integral operators. The course may also cover a more
