CableIQ™ Copper Qualification Tester: By Fluke Networks**Introduction To Network Cabling Copper**

These categories specify the type of copper wire -- most telephone and network wire is copper -- and jacks. The number (1, 3, 5 and so on) refers to the revision of the specification and, in practical terms, to the number of twists inside the wire -- i.e., to the quality of connection in a jack. CAT1 is typically used for telephone wire. This type of wire is not capable of supporting computer network traffic and is not twisted.

Types of network cables: An introduction to network cabling

When 10 Mbps Ethernet was most popular, during the 1980s and early 1990s, networks typically used one of two kinds of coax cable — thinnet (10BASE2 standard) or thicknet (10BASE5). These cables consist of an inner copper wire of varying thickness surrounded by insulation and another shielding. Their stiffness caused network administrators difficulty when installing and maintaining thinnet and thicknet.

Introduction to Network Cables and Network Cable Types

Our old copper based cabling simply wont support the speeds and data capacity needed this day in age. Big companies such as AT&T/Verizon & even the U.S. Government have invested in updating our old copper cabling to Fiber Optic Cabling.
