The second SAGES (Society of American Gastrointestinal Endoscopic S- geons) manual was intended to be a companion piece for the successful ?rst SAGES manual, edited by Carol Scott-Connor, that was published more than 4 years ago. Originally, the goal was to concentrate on tersely covered or often ignored aspects of the preoperative preparation of the patient and the operating room as well as the postoperative care of patients undergoing minimally in- sive operations. It was also our intention to include a section for each procedure where several different port placement schemes would be presented and brie?y discussed. Unique to this manual, the impact of the patient's body habitus (short or long, narrow or wide) on port placement is also taken into account for many of the procedures. Also unique are chapters devoted to hypothermia, port wound closure, and the management of subcutaneous emphysema and abdominal wall hemorrhage caused by trocars. Naturally, the surgeon tends to focus on the technical aspects of the pro- dure, such as the operative tasks to be carried out, the order of operation, and the position of the surgeon and assistant. However, it is critical that the surgeon be aware that the CO pneumoperitoneum, far more so than laparotomy, results 2 in multiple physiologic alterations that, if not compensated for by the anest- siologist and surgeon, may endanger the patient or prevent the laparoscopic c- lection of the procedure.

Manual of Hypertension is a comprehensive guide to current medical understanding of hypertension, its complications and management. Manual of Hypertension incorporates the latest clinical trials and JNC 8 guidelines, providing up-to-date content. With colour images throughout, this book is ideal for use in everyday clinical practice.

For the first time in over 20 years, a comprehensive collection of photographs and descriptions of species in the fungal genus Fusarium is available. This laboratory manual provides an overview of the biology of Fusarium and the techniques involved in the isolation, identification and characterization of individual species and the populations in which they occur. It is the first time that genetic, morphological and molecular approaches have been incorporated into a volume devoted to Fusarium identification. The authors include descriptions of species, both new and old, and provide protocols for genetic, morphological and molecular identification techniques. The Fusarium Laboratory Manual also includes some of the evolutionary biology and population genetics thinking that has begun to inform the understanding of agriculturally important fungal pathogens. In addition to practical [how-to] protocols it also provides guidance in formulating questions and obtaining answers about this very important group of fungi. The need for as many different techniques as possible to be used in the identification and characterization process has never been greater. These approaches have applications to fungi other than those in the genus Fusarium. This volume presents an introduction to the genus Fusarium, the toxins these fungi produce and the diseases they can cause. [The Fusarium Laboratory Manual is a milestone in the study of the genus Fusarium and will help bridge the gap between morphological and phylogenetic taxonomy. It will be used by everybody dealing with Fusarium in the Third Millenium.] --W.F.O. Marasas, Medical Research Council, South Africa

To effectively incorporate the explosion of new information in the wildlife profession, this latest edition is logically organized into a two-volume set: Volume 1 is devoted to research techniques and Volume 2 focuses on management methodologies.

In this new edition, chapters from the previous editions have been thoroughly revised and updated and new material has been added on Myofascial Release, Somatics, Friction massage, and much more.

The much-anticipated revision of the second edition of The SAGES Manual: Fundamentals of Laparoscopy, Thoracoscopy, and GI Endoscopy, has been completely restructured, reorganized, and revised. The Manual has been split into two volumes for better portability. Volume I, Basic Laparoscopy and Endoscopy covers the fundamentals and procedures performed during surgical residency. Volume I will be the first volume used by students, residents, and allied healthcare professional trainees. Material has been added to these fundamentals and procedures that will also be of interest to experienced surgeons. Volume II, Advanced Laparoscopy and Endoscopy covers more advanced procedures, generally taught during fellowship. All of the sections have been reorganized with a critical eye to the needs of the modern minimal access surgeon. Two new editors have been added. Chapters have been revised by both new authors as well as many stalwart authors from previous editions. These portable handbooks cover all of the major laparoscopic and flexible endoscopic procedures in easy-to-read format. Indications, patient preparation, operative techniques, and strategies for avoiding and managing complications are included for the complete spectrum of both [gold standard] and emerging procedures in diagnostic and therapeutic laparoscopy, thoracoscopy, and endoscopy. The scope, detail, and quality of the contributions confirm and demonstrate the SAGES commitment to surgical education. This manual is sure to find a home in the pocket, locker or briefcase of all gastrointestinal endoscopic surgeons and residents.

The effectiveness of CBT depends on the quality of the supervision and training that is provided to its practitioners. A Manual for Evidence-Based CBT Supervision is intended to significantly strengthen the available resources for training and supporting CBT supervisors. The authors drew on the insights of many accredited CBT supervisors to develop the guidance, and the work is built firmly on an evidence-based approach. This manual will also be useful for individual supervisors and to those who support and guide trainers and supervisors (e.g., peer groups, consultants, managers, administrators, training directors), as the authors include training supervision guidelines and training materials (e.g., video clips, guidelines and PowerPoint slides). In summary, this manual provides critical guidance in a number of areas: Training resources and evidence based guidance to individual supervisors in a continuing education/professional development workshop format Criteria and guidance (including measurement tools and competence standards) to support the certification of supervisors Assisting in a [train the trainers] approach suitable for agency or organization-based training of supervisors Coaching and training supervisors and supervisees remotely, through supplementary materials and an interactive website
