Although the healing qualities of nature have been recognized and relied on for centuries as a valuable part of convalescence, recent history has seen nature's therapeutic role virtually eclipsed by the technological dominance of modern medicine. As the twentieth century comes to a close and the medical community reacknowledges the importance of the environment to recovery, the healing garden is emerging as a supplement to drug- or technology-based treatments. Healing Gardens celebrates this renewed interest in nature as a catalyst for healing and renewal by examining the different therapeutic benefits of healing gardens and offering essential design guidance from experts in the field. Unique and comprehensive, Healing Gardens provides up-to-date coverage of research findings, relevant design principles and approaches, and best practice examples of different types of healing gardens. It begins by exploring what current research reveals about the connection between nature, human stress reduction, and medical outcomes. It then presents case studies and design guidelines for outdoor spaces in medical settings that include general, psychiatric, and children's hospitals as well as hospices, nursing homes, and Alzheimer's facilities. Historical information, literature reviews, and studies on use are included for each type of outdoor space covered, offering important insights into what works in healing gardens-and what doesn't. Generously supplemented with photographs, site plans, anecdotes, and more, Healing Gardens is an invaluable practical guide for landscape architects and others involved in

Creating and maintaining medical facilities, and an extremely useful reference for those responsible for patient care. A unique and comprehensive look at the therapeutic effects and design of healing gardens For more and more people, the shortest road to recovery is the one that leads through a healing garden. Combining up-to-date information on the therapeutic benefits of healing gardens with practical design guidance from leading experts in the field, Healing Gardens is an important resource for landscape architects and others working in this emerging area. With the help of site plans, photographs, and more, it presents design guidelines and case studies for outdoor spaces in a range of medical settings, including: \* Acute care general hospitals. \* Psychiatric hospitals. \* Children's hospitals. \* Nursing homes. \* Alzheimer's facilities. \* Hospices.

Connecting People, Place and Design examines the human relationship with place, how its significance has evolved over time and how contemporary systems for participation shape the places around us in our daily lives. Divided into three parts – place, people and participation – this interdisciplinary volume examines people, place and design across the fields of architecture, design, cultural studies, sociology, political science and philosophy. Part I, on place, considers the cultural, political and philosophical shifts in our historical relationship to place. Part II, on people, considers movement and migration and how it affects place relations. Part III, on participation, examines forms of public engagement and cultural systems for collaborative contribution to the design and creation of place. Improving people ' s relationships with place

requires connection, and in *Connecting People, Place and Design*, Edmonds demonstrates the importance of connection, underscoring that working together to nurture and sustain places that celebrate the diversity of our human species is one of the most critical issues of our time.

Urban Open Space identifies critical user needs and guidelines for addressing these needs in the planning, design, and management of public spaces."--Jacket.

"A lively, unexpected portrait of the jet-age stewardesses serving on iconic Pan Am airways between 1966 and 1975"--

Who controls space? Powerful corporations, institutions, and individuals have great power to create physical and political space through income and influence. People ' s Spaces attempts to understand the struggle between people and institutions in the spaces they make. Current literature on cities and planning often looks at popular resistance to institutional authority through open, mass-movement protest. These views overlook the fact that subaltern classes are not often afforded the luxury of open, organized political protest. People ' s Spaces investigates individual ' s diverse approaches in reconciling the difference between their spatial needs and spatial availability. Through case studies in Southeast Asia, India, Nepal, and Central Asia, the book explores how people accommodate their spatial needs for everyday activities and cultural practices within a larger abstract spatial context produced by the power-holders.
