Problem-Solving Phase 1. Analysis
and Specification. Understand (define)
the problem and what the solution
must do. 2. General Solution

(Algorithm). Specify the required data types and the logical sequences of steps that solve the problem. 3. Verify. Follow the steps exactly to see if the solution really does solve the problem. Implementation Phase 1. Concrete Solution (Program).

Overview of Programming and Problem Solving

Here's my process and some tips to tackling a sample problem that hopefully some of you may find helpful in your journey. 1. Read the problem at least three times (or however many

makes you feel comfortable) You can't solve a problem you don't understand. There is a difference between the problem and the problem you think you are solving.
