Focusing on integrated processes with material recycling, we establish a connection between process integration and process intensification.

Specifically, we use an asymptotic analysis to demonstrate that intensification represents a limit case of tight integration through significant material recycling.

Process Integration and Intensification - De Gruyter

The IEA(International Energy Association) defined Process Integration as the "Systematic and General Methods for Designing Integrated Production Systems, ranging from Individual Processes to Total Sites, with special emphasis on the Efficient Use of Energy and reducing Environmental Effects" . Certain minor additions were made later in the definition, but it essentially portrayed the original.

What is the difference between process intensification and ... analysis, synthesis and retrofit of process plants. The goals of process integration are 1) to integrate the use of materials and energy, and 2) to minimize the generation of emissions and wastes. Process integration is built on three basic concepts: 1. Consider the big picture first by
