René Descartes was a philosopher whose work, *La Géométrie*, includes his application of algebra to geometry from which we now have Cartesian geometry. René Descartes' parents were Joachim Descartes (1563 - 1640) and Jeanne Brochard (1566 - 1597). Joachim, the son of the medical doctor Pierre Descartes (1515 - 1566), studied law and was a counsellor in the Parliament of Brittany which sat at Rennes.

*René Descartes (1596 - MacTutor History of Mathematics*

Although analytic geometry was far and away Descartes' most important contribution to mathematics, he also: developed a "rule of signs" technique for determining the number of positive or negative real roots of a polynomial; "invented" (or at least popularized) the superscript notation for showing powers or exponents (e.g.  $2^4$  to show  $2 \times 2 \times 2 \times 2$ ); and re-discovered Thabit ibn Qurra's general formula for amicable numbers, as well as the amicable pair 9,363,584 and 9,437,056 ...
