DOI:10.1093/acprof:oso/9780198719571.003.0018. This chapter offers a ready-to-use ethical checklist for research on social movements and political contention. It develops around four main "questions," each representing a challenge to researchers and addressing a distinct ethical side of the research process: the question of relevance of the research to the activist community; the risks for the researched that result from the study of their dissenting practices; the question of power, in ...

What ethical challenges are faced by researchers studying social and political movements? Should scholars integrate their personal politics and identities into their research? What role should activists have in shaping the purposes or processes of social scientific research? How do changing political contexts affect the ethical integrity of a research project over time? These are some of the live issues of research ethics that face students and scholars whose research 'subjects' are located in contentious political terrain. The contributors to this volume expose their own ethical thinking as they have met such challenges head on. Each explores real dilemmas of ethical practice on the ground as they carry out research on social movements across the globe. Authors examining pro-democracy activists in Malaysia, sanctions-breakers in the Gaza Freedom Flotilla, environmental health organisations in North America and much else find that the narrow confines of Research Ethics Committees and Institutional Review Boards offer little guidance on the questions that really matter. They offer instead a demonstration of continual reflexivity that is both personal and political in its approach. This book opens up debate on research ethics, delineating key challenges and offering hopeful and practical ways forward for real-world, ethical social science. This bookw as published as a special issue of Social Movement Studies.

of Social Movement Studies.

Social movement studies have grown enormously in the last few decades, spreading from sociology and political science to other fields of knowledge, as varied as geography, history, anthropology, psychology, economics, law and others. With the growing interest in the field, there has been also an increasing need for methodological guidance for empirical research. This volume aims at addressing this need by introducing main methods of data collection and data analysis as they have been used in past research on social movements. The book emphasises a practical approach, presenting in each chapter specific discussions on the main steps of research using a certain method; from research design to data collection and the use of information. In doing so, dilemmas and choices are presented, and illustrated within chapters following the same systemic approach.

This book maps complex ethical dilemmas in social justice research practices in media and communication. Contributors critically analyse power dynamics that arise when building equitable research relations with media activists, social movements, and cultural producers, considering issues of access, control, affective labour, reciprocal critiques, and movement pedagogies. Authors probe the ethical challenges faced when horizontal relations inadvertently create conflicts leading to oppressive communication; when affective demands generate non-reciprocal relations of care; and when participant anonymity has to be balanced with self-expression and voice. Chapters explore engagements with digital technologies in developing research relations, covering new research practices from horizontal collectives to dialogical auto-ethnography; from community scholarship and pedagogies to decolonising research. The book asks researchers to consider the complexities of ethical practices today in socially engaged global research within the neoliberal university.

The book asks researchers to consider the complexities of ethical practices today in socially engaged global research within the neoliberal university.

As extreme and far right movements become increasingly widespread in many countries, the sociology of social movements is called to confront them. This book addresses the specific challenges entailed by the empirical study of such movements, presenting case studies from Japan, Thailand, England, France, Italy, the USA, and Turkey. Based on empirical fieldwork, the chapters explore the ethics and politics of researching far right movements, considering the researcher's reflexivity and the methodological issues raised by being emotionally linked to a research object that affirms and strives for values that differ markedly from those of the researcher. As such, it will appeal to scholars of sociology and politics with interests in social movements and research methods.

What ethical challenges are faced by researchers studying social and political movements? Should scholars integrate their personal politics and identities into their research? This book opens up debate on research ethics, delineating key challenges and offering hopeful and practical ways forward for real-world, ethical social science. This book was published as a special issue of Social Movement Studies.

Brings together international scholars across the social and behavioural sciences and education to address those ethical issues that arise in the theory and practice of research within the technologically advancing and culturally complex world in which we live.

Presents a series of papers focused on the complex dynamics of coalitions and the interorganizational relations within social movements. This volume includes a section, which focuses on strategic decision making in social movements, including with regard to strategic alliances.
