Handbook of Interpersonal Competence Research offers a vital desk reference to anyone doing research on social skills and interaction. Interpersonal competence, defined broadly, refers to the quality or skillfulness of social interaction. The reference manual provides a complete and comprehensive bibliography on this subject, with over 1,600 entries, in addition to a review of over 80 measures directly related to the study of competence. The Handbook covers more measures, more constellation measures, and provides a far more detailed bibliography than any source available to date. No other work on this subject approaches the level of breadth and depth of both published and unpublished background sources. Handbook of Interpersonal Competence Research will be valuable to clinicians, consulting psychologists, organizational consultants, researchers, and students interested in the assessment of social skills.

The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

Previous editions ('Social Skills in Interpersonal Communication') have established this work as the standard textbook on communication. Directly relevant to a multiplicity of research areas and professions, this thoroughly revised and updated edition has been expanded to include the latest research as well as a new chapter on negotiating. Key examples and summaries have been augmented to help contextualise the theory of skilled interpersonal communication in terms of its practical applications. Combining both clarity and a deep understanding of the subject matter, the authors have succeeded in creating a new edition which will be essential to anyone studying or working in the field of interpersonal communication.

Following in the same tradition as two other edited collections that revolutionized interpersonal communication research (G.R. Miller's Explorations in Interpersonal Communication and M.E. Roloff & G.R. Miller's Interpersonal Processes) New Directions in Interpersonal Communication presents the latest research being done today and reflects the changes that have occurred in interpersonal communication research during the past 18 years. A combination of established and newer scholars, as well as boundary spanners (those who are applying interpersonal theories and concepts to areas such as family, health, intercultural, organizational, and mediated communication) illustrate the wealth and breadth of this area of study and research.

This book brings together recent research on interpersonal relationships in education from a variety of perspectives including research from Europe, North America and Australia. The work clearly demonstrates that positive teacher-student relationships can contribute to student learning in classrooms of various types. Productive learning environments are characterized by supportive and warm interactions throughout the class: teacher-student and student-student. Similarly, at the school level, teacher learning thrives when there are positive and mentoring interrelationships among professional colleagues. Work on this book began with a series of formative presentations at the second International Conference on Interpersonal Relationships in Education (ICIRE 2012) held in Vancouver, Canada, an event that included among others, keynote addresses by David Berliner, Andrew Martin and Mieke Brekelmans. Further collaboration and peer review by the editorial team resulted in the collection of original research that this book comprises. The volume (while eclectic) demonstrates how constructive learning environment relationships can be developed and sustained in a variety of settings. Chapter contributions come from a range of fields including educational and social psychology, teacher and school effectiveness research, communication and language studies, and a variety of related fields. Together, they cover the important influence of the relationships of teachers with individual students, relationships among peers, and the relationships between teachers and their professional colleagues.

The revised Fourth Edition of The SAGE Handbook of Interpersonal Communication delivers a clear, comprehensive, and exciting overview of the field of interpersonal communication. It offers graduate students and faculty an important, state-of-the-art reference work in which well-known experts summarize theory and current research. The editors also explore key issues in the field, including personal relationships, computer-mediated communication, language, personality, skills, nonverbal communication, and communication across a person's life span. This updated handbook covers a wide range of established and emerging topics, including: Biological and Physiological Processes Qualitative and Quantitative Methods for Studying Interpersonal Communication Interpersonal Communication in Work, Family, Intercultural, and Health Contexts Supportive and Divisive Transactions Social Networks Editors Mark L. Knapp and John A. Daly have significantly contributed to the field of interpersonal communication with this important reference work a must-have for students and scholars.

The Third Edition of the Handbook of Interpersonal Communication includes eight new chapters and eleven revised from the second edition. Following an introductory chapter, the volume is organized into four parts covering perspectives on inquiry in interpersonal communication, fundamental units of interpersonal communication, processes and functions, and interpersonal contexts. Features include: · Each chapter reviews and updates research in its respective area · Part II examines methodological issues in the field · Includes articles by top scholars in the field of Interpersonal Communication

This exceptional collection--a compilation of meta-analyses related to issues in interpersonal communication--provides an expansive review of existing interpersonal communication research. Incorporating a wide variety of topics related to interpersonal communication, including couples and safe sex, parent-child communication, argumentativeness, and self-disclosure, the contributions in this volume also examine such basic issues as reciprocity, constructivism, social support in interpersonal communication, as well as gender, conflict, and marital and organizational issues. With contributions organized into five sections, this volume: *sets the stage for independent meta-analyses; *provides an overview of individual characteristics in interpersonal communication and the meta-analyses reflecting this theme; *explores the dyadic and interactional approaches to interpersonal communication; and *examines the impact of the meta-analyses on the understanding of interpersonal communication. As a resource for interpersonal communication researchers at all levels, this volume establishes a solid foundation from which to launch the next generation of study and research.

This book describes the available options, and the rationale for selecting among them, for observing, measureing or assessing process of communication. This approach contrasts radically to the one taken in many preceding volumes which explain the applicability of general types of quantitative research, for example, content analysis, laboratory experiments, and statistical analysis, to the study of communication. This approach focuses on the methodological problems and solutions unique to the study of communication. It provides the readers with an outline of the problems and/or alternatives that face the researcher.
