This handbook is an invaluable resource on the principles and practice of Yamamoto New Scalp Acupuncture (YNSA). This popular form of scalp acupuncture is used to treat a wealth of neurological conditions, and is very effective in stroke patients with pain and restricted mobility, providing relief from the symptoms. David Bomzon is an international expert on YNSA and he includes step-by-step explanations of points, points location, indications for needling, and clinical cases, all supported by line drawings and photographs. Uniquely, this book is written by an acupuncturist for acupuncturists, chiropractors and physical therapists, and the author clearly reconciles the theoretical needling points described by Yamamoto with actual needling points. Basic, sensory, brain, Y (epsilon) and cranial points are all covered, as well as instructions on applying YNSA in the clinic. The handbook also explains the

A detailed discussion of indications, contraindications, diagnosis, needling selection, techniques, and possible side effects gives readers everything they need to determine the most effective treatment protocols for each patient. Features of the second edition: A new chapter on energy and healing explains how YNSA works Carefully selected clinical cases demonstrate how to integrate YNSA into daily practice A color-coded laminated chart displays every YNSA point and serves as a convenient reference in the clinical setting 86 illustrations and algorithms supplement descriptions of points and treatments Online access to videos of narrated, live presentations of palpatory, diagnostic, and therapeutic techniques The second edition of Yamamoto New Scalp Acupuncture is an ideal introductory text for newcomers to the field as well as an indispensable resource for acupuncturists and pain specialists seeking to optimize patient care.

This new book could make a difference in the life of a patient when no other therapies will help. The authors, who have a combined 60 years of experience using Chinese scalp acupuncture, have composed a thorough clinic manual for practical clinical applications of scalp acupuncture to treat patients who suffer from seriously debilitating conditions such as the sequelae of stroke, phantom limb pain, PTSD, Meniere's syndrome, multiple sclerosis, herpes zoster, seizures, essential tremor, and Parkinson's Disease. The authors begin with an introduction to the neuroanatomy and neurophysiology of the brain and scalp for non-Western medical practitioners. They review Chinese medical theories supporting the use of scalp acupuncture, provide thorough explanations of area locations and uses, and include details of needling technique specific to scalp acupuncture. There are over 40 case studies with treatment details, as well as excellent illustrations of each treatment area.

Neuropuncture is the clinical manual of a groundbreaking acupuncture system that incorporates neuroscience into its clinical applications for pain management, orthopaedic conditions and internal medicine. It

shows acupuncturists how to apply research into the neurophysiological mechanisms of acupuncture and electrical acupuncture to the traditional TCM model of healthcare. The book explains how acupuncture works using Western medical science and illustrates how to apply this knowledge to clinical cases with electrical acupuncture, creating evidence-based acupuncture protocols. These protocols are clinically proven and result in reproducible clinical outcomes.

Written by two leading experts in the field, *Acupuncture in Neurological Conditions* aims to improve patient care by combining Western and Traditional Chinese Medicine (TCM) concepts of treatment. The language of TCM is uniquely combined with that of evidence-based clinical reasoning to provide an approach relevant to both acupuncture and physiotherapy clinical practice. All major types of neurological conditions encountered in clinical practice are examined. Chinese medical patterns relevant to the application of acupuncture are described, as well as key patterns of dysfunction based on a Western medical perspective. The place of acupuncture within the overall management of different neurological conditions is also discussed. Clinical reasoning options from both TCM and Western medical perspectives are provided, and illustrated by real cases from clinical practice forming a sound platform for true integrated medicine. Fully evidence-based Provides clinical reasoning options from TCM and Western medical perspectives Illustrates clinical reasoning with real cases from clinical practice Provides detailed examination of all major types of neurological conditions encountered in clinical practice.

This book systematically introduces the Brain in Traditional Chinese Medicine (TCM) and its acupuncture treatments. It discusses the origin and development of the TCM Brain theory, and presents current research on brain and acupuncture, the unique brain related techniques such as scalp acupuncture and Dao-qi technique, the new developing acupuncture treatment methods for brain-related conditions, such as stroke, Parkinson's, dementia, Alzheimer's disease, multiple sclerosis, traumatic brain injury, autism, cerebral palsy and depression, anxiety, bipolar disorder among others. This book is of interest to TCM and acupuncture practitioners in the West, as well as acupuncture researchers and lecturers. It gives a new understanding of the brain and treatments for brain-related conditions from a complementary medicine point of view.
