Early identification and treatment of cytokine storm with anakinra and corticosteroids led to improved outcomes compared to initiating tocilizumab shortly after mechanical ventilation. Early identification and treatment of cytokine storm may be more important than which anti-inflammatory treatment is chosen

The only book to deal specifically with the treatment of gait problems in cerebral palsy, this comprehensive, multi-disciplinary volume will be invaluable for all those working in the field of cerebral palsy and gait (neurologists, therapists, physiatrists, orthopaedic and neurosurgeons, and bioengineers). The book is divided into two parts. The first is designed to help the reader evaluate and understand a child with cerebral palsy. It deals with neurological control, musculoskeletal growth, and normal gait, as well as cerebral injury, growth deformities and gait pathology in children with cerebral palsy. The second section is a comprehensive overview of management. It emphasizes the most fundamental concept of treatment: manage the child's neurologic dysfunction first and then address the skeletal and muscular consequences of that dysfunction. The book has been thoroughly updated since the previous edition, with a greater focus on treatment and several entirely new topics covered, including chapters on the operative treatment of orthopaedic deformities. The book is accompanied by a DVD containing a teaching video on normal gait and a CD-ROM containing the videos and motion analysis data of all case examples used in the book, as well as teaching videos demonstrating the specifics of many of the procedures used in the correction of gait deformities and gait modelling examples from the Department of Bioengineering at Stanford University.

Chapter 1 of this document defines school phobia as an exaggerated and irrational fear of attending school. In this chapter, school phobia is distinguished from truancy, the incidence and consequences of school phobia are discussed, characteristics of school phobia are described, and types of school phobia are identified. The chapter concludes with an estimation that school phobia is found in approximately two percent of the school population. Chapter 2 looks at the etiology of school phobia, reviewing psychoanalytic theories, psychodynamic theories, the families of school phobics, and biological factors. Chapter 3 focuses on the evaluation and identification of school phobia. The use of decision matrices is explained, a rationale is given for using matrices, and procedures for using decision matrices are described. Chapter 4 concentrates on intervention techniques, providing an overview of intervention research and looking at issues such as forced school attendance; rapid treatment; medication, hypnosis, and relaxation treatments; and parent involvement. Chapter 5 presents six case histories of children with school phobias. Chapter 6 discusses prevention of school phobia and offers recommendations for training and research. Warning signs of school phobia, a sample student data sheet, suggested resources, and a sample handout on school phobia are appended. A subject index concludes the document. (Contains 142 references.) (NB)
