Urban economics is broadly the economic study of urban areas; as such, it involves using the tools of economics to analyze urban issues such as crime, education, public transit, housing, and local government finance. More specifically, it is a branch of microeconomics that studies urban spatial structure and the location of households and firms. Much urban economic analysis relies on a particular model of urban spatial structure, the monocentric city model pioneered in the 1960s by William Alonso

Urban economics - Wikipedia

A comprehensive theory of a system of cities is an essential component of economists' efforts to understand and model economic growth and international trade. Modern urban economics, traced to Alonso (1964), Mills (1967) and Muth (1969) spearheaded a theory of the internal structure of a city emphasizing land markets and land use.
